

CSE 102 Homework Assignment 3

DUE

December 1, 2020, 23:55

Description

- This is an individual assignment. Please do not collaborate
- If you think that this document does not clearly describe the assignment, ask questions before its too late.
- This assignment is about simple file read/write, array usage and string operations. You can use pointers and functions. You cannot use dynamical memory allocation. You cannot use recursion. You can use global variables. You can use standard string library operations.

This is a C Programming assignment. You will write a C program according to the following description.

- You are given a file(`input1.txt`) which contains a list of words(one word at a line).
- You are given a file(`input2.txt`) which contains lines of character strings of various sizes.
- Your program should read the given files (`input1.txt` and `input2.txt`) and for each word in `input1.txt`, find the location and the orientation in `input2.txt`.
- Strings can appear vertically or horizontally. Once all the strings are found, your program should write their head position and the orientation to `output.txt` file.
- The order of words in `input1.txt` and `output.txt` should match. (Ignore the missing words)
- Some words may be missing in `input2.txt`. `output.txt` should not include the missing words.

Example

Contents of `input1.txt`:

Xanthos
Patara
Myra
Adana
Arycanda
Phaselis

Contents of `input2.txt`:

```
askjdkdanmowflfkadkjkaksdksksadllas  
fkfklsal;sdslfsdkdfkMyraslfsfeokdlsd  
wfewfPsdflsdflsdosfkeowkfweofkwoefkksf  
sdfsdkjewofksdfoiwefjowefks;dfPhaselissdfkefowefjksdlfjslfsldfj  
oefkwtifjslflsdflkjeifjsl;asldkiefjiefjlskfdjeifjksk  
sdlfkawioAjksdlfkeifslkefjiwfejsllfjeighghj;wp  
dfkjerwfr;s;dlskfjfiwflwekfjwlefiwhgweffiw  
sdfkkafwXanthosdkfjlsAfdjiefeiwwewefiefjowiefehgl;lewofjefw  
iieofnFGSAiejfiwefjhrwefiweffiwjefihhweffklksdf  
skkfjwifjwiwiefiefwfy[pwpfjwifwefijijwhi]  
sdfijwiefjiwhiweffiwefjwefi;aijdijeifwuefhwoefjowehi  
iiwefiwefjwiefjwiefjiajiefiwefflksajsdkskfiwefhfiwefjowiefhaskjlskdfu  
iwjefijefmmiewifjweifnklksjdiaifwefpweffijfiwefOWOEFIEWfnweiu  
jfnwefiwfpwfjiefjiwefdjwfljfwiefjiwefwflijijfiwefhu  
kkfiefiewpfpkfjfhewfoawefkwoefojwfoewekowefkwo
```

`output.txt`:

Xanthos (8,9) Horizontal
Patara (3,6) Vertical
Myra (2,22) Horizontal
Arycanda (8,22) Vertical
Phaselis (4,32) Horizontal

Remarks:

- For `input2.txt`, strings which correspond to rows are separated by whitespace.
- For `input2.txt`, Maximum length of each row is 250
- For `input2.txt`, Maximum number of rows is 100
- Position indices start from 1.
- For `input1.txt`, there is no limit on the number of words.
- For `input1.txt`, maximum word length is 10 characters.
- You don't have to do error checking on the input file. You can safely assume that you will be given a proper input file which doesn't violate the described format.
- Be careful with the size of the array you allocate in program stack. Large arrays may not fit in program stack(stack size may be smaller on the test machine) and your program crashes.
- Make sure you can read input files with or without a trailing newline at the end. (If you are using a windows machine, newline is CRLF, on unix it is LF). You can alter this using advanced editors (i.e. Visual Studio Code). Test your code for every possible combination.
- Do not print anything other than the expected output. (For this assignment, your program prints NOTHING).
- You cannot use anything which is not covered in class.
- Do not submit any of the files you used for testing.
- Do not submit your output file.

Turn in:

- Source code of a complete C program. Name of the file should be in this format: `<full_name>_<id>.c`.
- Example: `gokhan_kaya_000000.c`. Please do not use any Turkish special characters.
- You don't need to use an IDE for this assignment. Your code will be compiled and run in a command window.
- Your code will be compiled and tested on a Linux machine(Ubuntu). GCC will be used.
- Make sure you don't get compile errors when you issue this command : `gcc <full_name>_<id>.c`.
- A script will be used in order to check the correctness of your results. So, be careful not to violate the expected output format.
- Provide comments unless you are not interested in partial credit. (If I cannot easily understand your design, you may loose points.)
- You may not get full credit if your implementation contradicts with the statements in this document.

Late Submission

- Late submission is NOT accepted.

Grading (Tentative)

- Max Grade : 100.

All of the followings are possible deductions from Max Grade.

- No submission: -100. (be consistent in doing this and your overall grade will converge to N/A) (To be specific: if you miss 3 assignments you'll get N/A)
- Compile errors: -100.
- Irrelevant code: -100.
- Major parts are missing: -100.
- Unnecessarily long code: -30.
- Using language elements and libraries which are not allowed: -100.
- Not caring about the structure and efficiency: -30. (avoid using hard-coded values).
- Significant number of compiler warnings: -10.
- Not commented enough: -5. (Comments are in English).
- Source code encoding is not UTF-8 and characters are not properly displayed: -5. (You can use 'Visual Studio Code', 'Sublime Text', 'Atom' etc... Check the character encoding of your text editor and set it to UTF-8).
- Fails at reading the file: -30.
- Fails during file write: -30.
- Order of the word list is wrong: -20.

- Coordinates of horizontally placed words are wrong: -10 (each).
- Coordinates of vertically placed words are wrong: -10 (each).
- Missing words: -20.
- Incorrectly matching words: -20.
- Output format is wrong: -30. (Be careful with spacing)
- Infinite loop: -90.
- Prints anything extra: -30.
- Unwanted chars and spaces in `output.txt`: -30.
- Submission includes files other than the expected: -10.
- Submission does not follow the file naming convention: -10.
- Sharing or inheriting code: -200.
- IF YOU DON'T FOLLOW THE FILE NAMING CONVENTIONS YOU WILL GET 0.

Note: Some of these items are not independent. So, you cannot expect isolation of many of them. For example, if you cannot read input file correctly, you will fail to produce the correct output file. Partial grading is not guaranteed.
